

This is our Row- Row

Rowen was diagnosed with stage 4 High risk neuroblastoma on his 2nd birthday. Rowen has undergone extensive treatment, since November 2022, & is still on his treatment journey. He recently relapsed in March 2024, & is completing his second journey on his new road map of treatment.

Row row is a happy, mischievous, almost 4 year old little boy, with the biggest heart. Rowen enjoys the outdoors, going up-north, adventuring, playing with His water table & water toys. His favorite tv show is coco-melon, & his favorite movie is penguins of Madagascar. Rowen loves playing, & arranging his little people figurines, & taking them on adventures. He loves long golf cart rides with the family, & making memories with his baby sister, & all of his family and friends. He enjoys giggling, & playing with his groovy sunglasses. Rowen truly is just the sweetest little boy.

All of Our warriors desperately need additional research, and most importantly the funding for better treatment options for all of our children.
